Contents

Part 1 General Pathology

1 Basic Principles 3
Health and Illness 3
Fundamental Epidemiological Concepts . . 3
Causes of Illness 4
General Reaction Types of Cells and Tissues 4
Disease Progression 9

2 Types of Diseases 11
Genetically Determined Diseases 11
Disrupted Prenatal Development 16
Infectious Diseases 19
Disturbed Immune Reactions 26
Arteriosclerosis 31
Tumors 33

3 Cardinal Symptoms 43
Changed Skin Color 43
Bleeding Tendency 46
Accumulation of Fluid 47
Dyspnea 49
Nausea and Vomiting 50
Pain 50
Fever 52
Enlarged Lymph Nodes 53
Shock 54
Altered States of Consciousness 55
Syncope 56
Vertigo 57

4 Diagnostic Procedures 58
Medical History 58
Physical Examination 58
Laboratory Studies 59
Imaging 59
Functional Studies 63
Endoscopic Procedures 64

5 Principles of Therapy 66
Overview 66
Oncological Therapy 66
Organ Transplantation 69
Medications Relevant to Physical Therapists 72

Study Questions on General Pathology . . . 79

Part 2 Internal Medicine

6 Cardiology 83
Physiological Basis 83
Cardinal Cardiological Symptoms 87
Cardiological Diagnosis 90
Therapeutic Principles 96
Ischemic Heart Diseases 98
Cardiac Arrhythmias 104
Diseases of the Endocardium 110
Myocardial Diseases 113
Pericarditis 115
Congenital Heart Disease in Adults 115
Circulatory Diseases 117
Functional Heart Disease 120

7 Vascular Medicine 121
Cardinal Symptoms in Vascular Medicine . 121
Vascular Medicine Diagnosis 121
Diseases of the Arteries 123
Diseases of the Veins 129
Lymphedema 136

8 Pulmonology 137
Physiological Principles 137
Classification of Pulmonary Diseases 139
Cardinal Pulmonary Symptoms 140
Complications of Pulmonary Diseases . . . 140
Pulmonological Diagnosis 144
Acute Bronchitis 148
Chronic Obstructive Pulmonary Diseases 148
Bronchial Asthma 153
Pneumonia 155
Bronchial Carcinoma 157
Interstitial Pulmonary Diseases and Pulmonary Fibrosis 160
Systemic Diseases with Principal Manifestations in the Lungs 161
Acute Pulmonary Failure 163
Pulmonary Embolism 163
Sleep Related Respiratory Disorders 165
Diseases of the Pleura 166

9 Gastroenterology 169
Anatomical and Physiological Principles . . 169
Cardinal Gastroenterological Symptoms . 172
Gastroenterological Diagnosis 175
Diseases of the Esophagus 177
Diseases of the Stomach and Duodenum . 179
Diseases of the Small and Large Intestines 182
Diseases with Various Localizations 189
Diseases of the Liver 192
Diseases of the Gallbladder and Bile Ducts 197
Diseases of the Pancreas 198

10 Nephrology 202
Anatomical and Physiological Principles . . 202
Cardinal Nephrological Symptoms 204
Nephrological Diagnosis 205
Replacement of Kidney Function 207
Acute Renal Failure 209
Chronic Kidney Disease 209
Urinary Tract Infections 211
Kidney Stones 212
Kidney Cell Cancer 213

11 Metabolic Diseases and Endocrinology 214
Disorders of Carbohydrate Metabolism . . 214
Disorders of Lipid Metabolism 220
Disorders of Purine Metabolism 222
Overweight, Obesity, and Metabolic Syndrome 222
Disorders of Bone Metabolism 224
Diseases of the Pituitary Gland 229
Thyroid Diseases 234
Diseases of the Adrenal Cortex 238

12 Hematology 242
Physiological Principles 242
Cardinal Hematological Symptoms 244
Hematological Diagnosis 245
Anemia 246
Leukemia 247
Malignant Lymphoma 250
Disorders of Hemostasis and Clotting . . . 252

13 Rheumatology 256
Rheumatoid Arthritis 256
Spondylarthropathies 259
Collagenosis 261
Vasculitis 265

14 Infectiology 268
Diseases That Do Not Involve the Respiratory Tract Alone 268
Infectious Diarrheal Diseases 271
Staphylococcal and Streptococcal Diseases 273
Herpes Virus Diseases 275
Tetanus (Lockjaw) 278
Tick-Borne Diseases 279
Sexually Transmitted Diseases (STD) 281
Protozoan Diseases 284

Study Questions on Internal Medicine . . . 287

Glossary of Terminology 290
